

ABSTRACT OF THE DISCLOSURE

A wireless interface and dedicated digital video disc (DVD) controller for video game consoles capable of playing DVDs. An adapter is inserted into one of the communication ports of the game console and provides a wireless communication receiver for receiving and inputting control commands into the game console. A dedicated DVD remote control device includes a wireless transmitter for wirelessly transmitting DVD player control functions to the game console via the adapter and thereby enables wireless control of the DVD functions of the game console. The control buttons on the dedicated DVD remote control correspond in function to the wired game controller buttons that would otherwise control the DVD functions of the game console, but have an appearance to the user that corresponds to a standard DVD player remote control. Thus, the user need not navigate through menus or otherwise determine the DVD player functions of the wired game controller buttons with symbol designations used for various functions of game play.
